Customer Carbon Emissions Report

The methodology for producing these reports and associated GHG emissions has been independently verified by Toitū Envirocare. The data is suitable for use in an ISO 14064-1:2018 compliant inventory, including a Toitū carbonreduce or Toitū net carbonzero certified inventory.

The emission sources captured in this report include:

- Franchisor Fuel Consumption (Supplier-specific method, fuel type)
- Franchisor Energy Consumption (Supplier-specific method)
- Franchisor Business Air Travel (Distance-based method, domestic, international short-haul, international long-haul, emission factors with a radiative forcing factor)
- Franchisee Travel to Client Site (Average-data method per region)
- Franchisee Power Consumption (Average-data method)

The CO₂e presented in this report has been computed by applying latest emission factors from Ministry for the Environment (MfE) 2025 Emission Factors Workbook (<https://environment.govt.nz/publications/measuring-emissions-guide-2025/>). These factors were confirmed by Toitū Envirocare during an audit.

Specifics regarding the calculation methodology, including individual client share measurements, are considered commercially sensitive and are treated as confidential.

CONFIDENTIALITY:

The content of this report contains confidential information of Jani-King (NZ) Limited and is intended for the account holder with the account number identified in the report; it could also be used for audit (third-party) verification.

Find your latest tCO₂e emissions in kgCO₂e for the third quarter 2025 on the next page.
